environmental literacy is the level to which a person has a clear understanding of the problems facing the environment it is essential to have a working understanding of the current environmental issues this is due to the fact that the human economy is involved in a number of activities that are destabilising the ecosystems that protect both our species and the biological diversity of the earth there are several signs of this including pollution climate change dwindling fisheries deforestation agricultural soil degradation species extinction and endangerment and other disasters but we don't have to be very pessimistic if our nation adopts proactive measures now or soon it won't be too late to prevent or address a number of the critical environmental issues that put the wellbeing of people and the majority of other species in peril within certain bounds we are intelligent and clever creatures and our society is capable of implementing a sustainable economic system that can support both our way of life and a healthy environment however it is clear that any sustainable economy would require business practises that were different from those that were previously the norm it will also need considerable changes in many people's lifestyle especially in wealthy nations such socioeconomic improvements ultimately need to use a lot less energy materials and other resources than many of us do today also sorely needed is a more reverent attitude toward the natural world individuals will need to have a solid understanding of environmental issues to make such a transformation if access to resources is restricted many people may initially feel uneasy therefore i think that individuals will be more motivated to change their lives if they are aware of the reasons behind the adjustments in light of the livelihoods of future generations and ecological sustainability in general with this understanding most individuals will be in favour of social and economic changes that maintain the standard of their present and future settings wideranging environmental knowledge will be crucial if a nation like india aspires to successfully navigate the difficult transition to an environmentally sustainable economy this book was created in that context to assist indian university and college students in developing an unbiased and informed awareness of crucial environmental challenges in light of such situation the goal of this book was to

assist indian college and university students in developing an objective and solid understanding of the essential need to protect the environment

David D. Kumar and Daryl E. Chubin we live in an information age technology abounds information technology communication technology learning technology as a once popular song went something is happening here but it is just not exactly clear the world appears to be a smaller less remote place we live in it but we are not necessarily closely tied to it we lack a satisfactory understanding of it so we are left with a paradox in an information age information alone will neither inform nor improve us as citizens nor our democracy society or institutions no improvement will take some effort it is a heavy burden to be reflective indeed analytical and disciplined but only constructively constrained by different perspectives the science based technology that makes for the complexity controversy and uncertainty of life sows the seeds of understanding in science technology and society studies as it is known encompasses a hybrid area of scholarship now nearly three decades old as Dr. Sarewitz a former geologist now congressional staffer and an author put it after all the important and often controversial policy dilemmas posed by issues such as nuclear energy toxic waste disposal global climate change or biotechnology cannot be resolved by authoritative scientific knowledge instead they must involve a balancing of technical considerations with other criteria that are explicitly nonscientific ethics aesthetics equity ideology trade offs must be made in light of inevitable uncertainties Sarewitz 1996 p 182

this is one of the few books dealing with regime theory to be written from a legal point of view Jurgielewicz's book is part of an effort to promote interdisciplinary research on the nature of the international legal order her work explores the concept of international regimes within the international legal order utilizing the policy oriented approach to international law the study uses examples of global environmental change as models by examining the general international law applicable to climate change and ozone layer depletion the author attempts to explain the original need for regime formation in these areas next Jurgielewicz looks at the role of regimes within international law focusing on their formation maintenance source of legal obligation and compliance mechanisms the book concludes that regimes are present within the international legal order and play a vital role in maintaining that order this book will appeal to students in law schools graduate schools or advanced undergraduate seminars covering international

relations international legal theory international law and international organizations

the ozone layer was discovered in 1913 by the french physicists charles fabry and henri buisson the ozone layer has the capability to absorb almost 97 99 of the harmful ultraviolet radiations that sun emit and which can produce long term devastating effects on humans beings as well as plants and animals the earth s stratospheric ozone layer plays a critical role in absorbing ultraviolet radiation emitted by the sun in the last thirty years it has been discovered that stratospheric ozone is depleting as a result of anthropogenic pollutants ozone layer depletion is one of the most serious problems faced by our planet earth it is also one of the prime reasons which are leading to global warming ozone layer depletion describes two related phenomena observed since the late 1970s a steady decline of about four percent in the total amount of ozone in earth s stratosphere and a much larger springtime decrease in stratospheric ozone around earth s polar regions the latter phenomenon is referred to as the ozone hole chlorofluorocarbons cfcs and other halogenated ozone depleting substances ods are mainly responsible for man made chemical ozone depletion this book describes of international efforts to protect the ozone layer the greatest success yet achieved in managing human impacts on the global environment the book provides an account of the ozone depletion issues from the first attempts to develop international action in the 1970s to the mature functioning of the montreal regime this book represent state of knowledge regarding examines the parallel developments of politics and negotiations scientific understanding and controversy technological progress and industry strategy to draws some conclusions concerning the setting of goals for that shaped the issue s development and its effective management simply explained ozone layer depletion is an important book bringing together diverse viewpoints from environmentalist state agencies and regulators for all who wish to save earth with quality life
